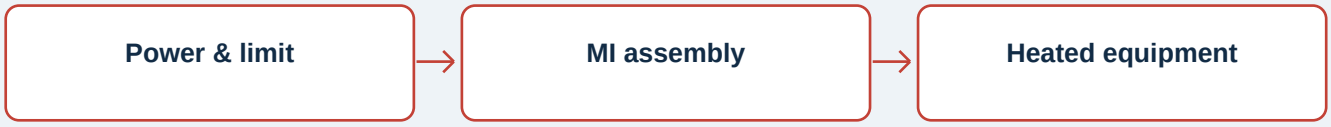
Mineral Insulated Heating Cables

A metal-sheathed resistance heating assembly with mineral insulation for demanding temperature or mechanical conditions.



Functional illustration - final equipment and connections depend on the selected design.

WHERE IT IS USED

High-temperature pipework; vessels; demanding industrial environments; specialist process duties.

WHAT HTUK CAN PROVIDE

Engineered heater lengths; cold leads and joints; attachment systems; sensors; control and limit functions.

TELL US ABOUT YOUR APPLICATION

Operating and exposure temperatures; required power; dimensions; sheath compatibility; voltage; hazardous-area details.

SELECTION & INTEGRATION

Heating lengths, loading, bend limits and sheath temperature require engineering to the selected assembly.

MANUFACTURERS & PARTNER RELATIONSHIPS

We select across multiple manufacturers. Your proposal identifies the chosen brand, HTUK's role and the warranty and support route. Any authorised distributor, installer or service status is stated only for the scope covered by a current agreement. Other brands may be sourced or supported where suitable.

SUPPORT THROUGHOUT THE SYSTEM LIFE

Application review and specification; procurement; installation; testing and commissioning; inspection, maintenance, repair and upgrades. Scope and deliverables are agreed in your proposal.
