Steam Heating

Steam-based heating equipment transfers thermal energy into a process, commonly through a separating heat-transfer surface.

Functional illustration - final equipment and connections depend on the selected design.

WHERE IT IS USED

Process liquid heating; hot-water generation; tanks and vessels; sites with steam infrastructure.

WHAT HTUK CAN PROVIDE

Heat exchangers; control valves; pressure reduction where required; traps; condensate equipment and instrumentation.

TELL US ABOUT YOUR APPLICATION

Heat duty; steam pressure; secondary medium; flow and temperatures; return conditions; materials and pressure ratings.

SELECTION & INTEGRATION

Review pressure boundaries, control response, drainage and condensate removal across the operating range.

MANUFACTURERS & PARTNER RELATIONSHIPS

We select across multiple manufacturers. Your proposal identifies the chosen brand, HTUK's role and the warranty and support route. Any authorised distributor, installer or service status is stated only for the scope covered by a current agreement. Other brands may be sourced or supported where suitable.

SUPPORT THROUGHOUT THE SYSTEM LIFE

Application review and specification; procurement; installation; testing and commissioning; inspection, maintenance, repair and upgrades. Scope and deliverables are agreed in your proposal.
